This modular system is conceived for contemporary work environments, but not only. The tables, containers, and bookcases take the form of solid metal structures defined by clean lines, smooth surfaces and compact contours.

Tables

The table is configured as a monolithic structure made entirely of metal; the legs consist of steel bars in L shaped profiles, 8mm thick, while the table top is entirely in folded sheet iron. The legs and top are assembled together by means of a special fastening system that ensures elevated safety and technical performance.

The table is available in both rectangular and square forms, in various sizes and two heights. It can be used as a desk, in both executive and task-area versions, also in the L-configuration with an adjoined typing table, or as a meeting table. All of the metal components are treated with special high-strength paints.

Drawer pedestal

On glides or casters, with three drawers, one for hanging folders. The fall-front door at the rear provides access to a space for cable management.
Totem

Tall swivel tower cabinet accessible from two sides, with internal partition. The two doors open from one side to the other in a smooth pantograph motion by means of a patented mechanism. The tower contains eight metal shelves. Equipped with a unique door-opening mechanism (with rotation plus lateral shift), Totem is a swivel tower cabinet on a fixed base, accessible from two sides to make good use of its depth. Designed for archival storage, the cabinet presents itself as a smooth, compact monolith when closed.

Bookcases

With open shelving or with drop-front doors. The lower part of the bookshelves is made entirely in contoured sheet metal, while the legs are composed of extruded L-shaped steel profiles.

Manufactured in various lengths and heights (with two, three, or four shelves) the bookshelf is available both in the library version, completely open, and in the file storage version, closed with file front doors which, when open, become handy surfaces for consultation. All the metal components are treated with special high-strength paints.
