The iSatelliti S/200 workstation system consists of individual and multiple configurations, with fixed or electrically adjustable desktop heights. The structural components – beams, crossbeams, legs and feet – can be combined in various ways to create high-performance workstations in terms of stability, solidity and safety.

Each workstation has two legs, which also house the adjustment mechanism for raising and lowering the height of the desktop. The edges of the desktops can be flat or rounded. There are two types of feet: rectangular for individual workstations and circular for multiple configurations.

In both cases the legs are linked by a horizontal beam that transforms them into a single structural unit. The beam gives the workstation excellent structural stability while also providing support for the cable management components.

The cable management system is configured on two levels: the primary level is integrated within the fixed part of the base, while the secondary level is mounted beneath the top. The electrical cables are contained in sheet metal trays, with a closing door, or in wire mesh baskets, both epoxy powder coated.

Divider panels permit various privacy configurations for both the individual and multiple workstations, which can be further personalised by means of individual cable hatches and various types of electrical control modules.

The flexibility of the iSatelliti S/200 system makes it possible to reconfigure the workstations at any time. The system is completed by square and round meeting tables in various sizes and finishes.
